

## New presentation of the primary markets statistics

The CNMV has updated the presentation on the information published regarding the primary market.

The new statistics for the primary securities market include information on issues and admissions to trading of fixed-income securities, equity and other financial products in CNMV-supervised markets, categorised according to economic sectors, asset classes and terms of issue.

Among others, the following may be consulted: number of issuers, number of issues, nominal and effective volumes, interest rate averages, etc. Apart from the update of certain valuation criteria, the extension of information sources and the automation of their preparation, the following new features should be highlighted:

- The development of a new dashboard that offers an interactive view of the main aggregates and, in some cases, shows detailed information.
- Information on issues by Spanish companies in foreign markets and/or meeting ESG criteria is included.
- Interest rate averages in the primary market for different asset classes according to different criteria (market, term of issue or sector) are added.
